

Bent Candles

Instructions

- 1.) Fill sink or large bowl with hot water with candles and let them sit for 10 minutes or longer. This will soften the wax and make it easier to bend without breaking.

- 2.) Once the wax is bendable, carefully and slowly form the candle in whatever shapes you want. If the wax doesn't feel soft enough while molding, place candles back in the water for a few minutes more.

- 3.) When done bending the candles, use a knife or a peeler to cut the wax on the bottoms of the candle that will be sitting on a hard surface; this will make them more sturdy.
